

1 WHAT IS CLAIMED IS:

 1. An entertainment system comprising:
 a television receiver having a tuner and a
5 screen;

 means for displaying in a PIP window on the
screen moving images of a television program;

 a source of information relating to the
television program in the PIP window; and

10 means for displaying the program related
information on the screen in a background area that is not
covered by the PIP window.

 2. An entertainment system comprising:
15 a source of present television program schedule
information including a list of channels and the titles of
the programs presently being broadcast on such channels;
 a television receiver having a tuner and a
screen;

20 means for coupling the source to the receiver to
display at least the titles of the present program
schedule on the screen;

 a viewer control device for selecting one of the
displayed titles;

25 means responsive to the control device for
setting the tuner to the channel of the selected title;
and

 means for coupling the tuner to the display
device to display the video program in reduced size on
30 part of the screen concurrently with the program schedule.

 3. The method of using the system of claim 1,
comprising the step of sequentially selecting the
displayed titles with the control device to sequentially
35 change the displayed video program, thereby channel
surfing by using the displayed titles as a guide.
